A7
Cont.
d) about 3%, by weight, of a plasticizer; and

about 0.1% to about 3%, by weight (based on the 100% calculated base adhesive composition above), of a hindered phenolic antioxidant and wherein the hot melted adhesive composition following application displayed an improved open time, and room temperature flow properties, and further had a viscosity of about 2,000 cP at 200 [[0.degrees]] degrees C., and a melting point of about 150.degrees C.

[On page 13, replace paragraph [035] with the following amended paragraph [035]:

A8
[035] As noted earlier, traditional hot melt adhesives which had been formulated using SIS, SBS, SEBS and APAO (amorphous polyalpha olefin) have a propensity when exposed to water for prolonged periods of time, to lose their bond strengths, with the result that laminations prepared with such adhesives will fail when exposed for prolonged periods of time to water. This presents a problem with toy doll playthings in that children frequently bath their dolls in both hot and cold water. As should be understood, such delaminations of an adjoined or pendant element in a resin constructed toy such as a doll or the like may cause the toy item's core integrity to fail with resulting undesirable effects such as peeling parts or general disassembly. As can be appreciated, the instant combination of SEBS with another SEBS compatible elastomeric copolymer in a hot melt adhesive overcomes any such deficiency in an adh
